Who we are

We are a global organization that specializes in designing and manufacturing technologically advanced solutions for natural gas treatment, transmission and distribution systems.

We are the ideal partner for operators in the Oil & Gas sector, with a business solutions that span the whole natural gas chain.

We are constantly evolving to meet our customers' highest expectations in terms of quality and reliability.

Our aim is to be a step ahead of the competition, with customized technologies and an after-sale service program undertaken with the highest level of professionalism.

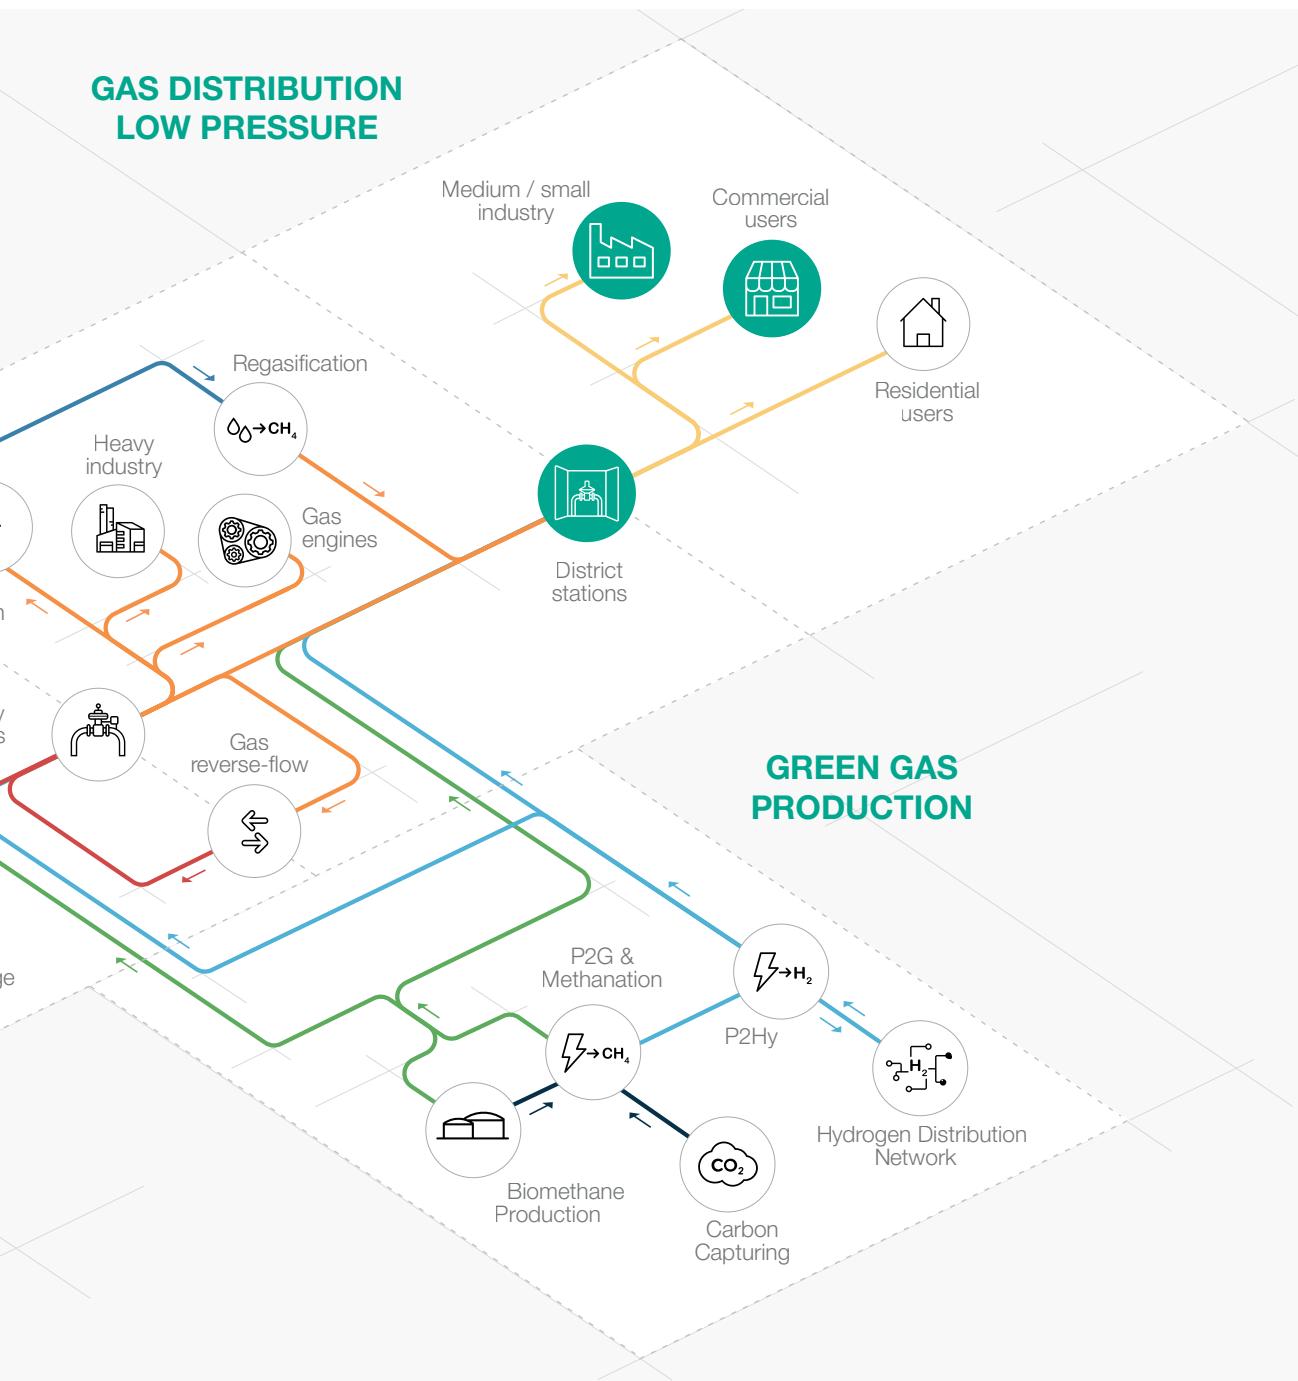

Figure 1 Area of Application Map

Introduction

The **Dival 700** by Pietro Fiorentini is a **lever-operated** gas pressure regulator controlled by a diaphragm and contrasting regulated spring action.

Mainly used for medium and low pressure natural gas distribution networks, as well as commercial and industrial applications.

It should to be used with previously filtered non-corrosive gases.

According to the European Standard EN 334, it is classified as **Fail Open**.

The Dival 700 is **Hydrogen Ready** for NG-H₂ blending.

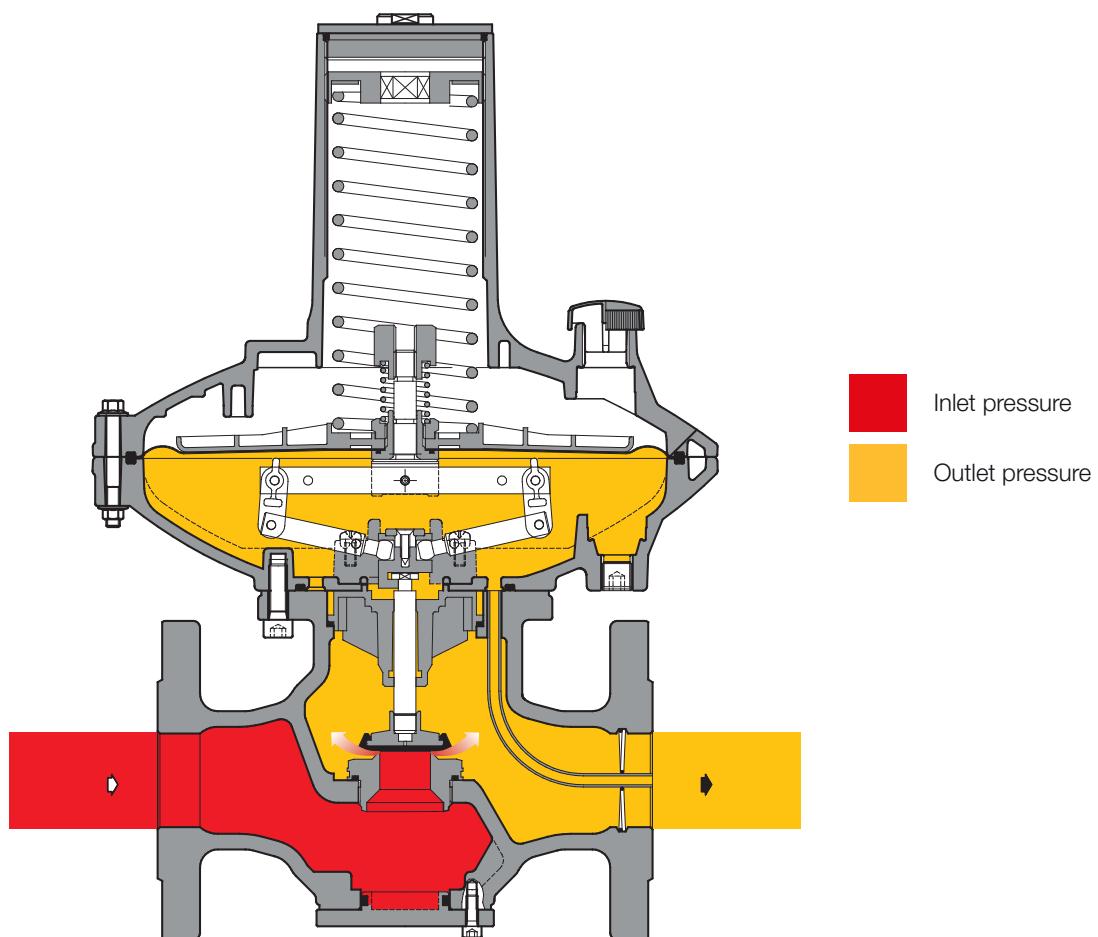

Figure 2 Dival 700

Features and Calibration ranges

The Dival 700 is a **lever-operated** device for medium and low pressure.

This regulator is suitable for use with previously filtered, non-corrosive gases and distribution networks as well as high load industrial applications.

It is a **truly top entry design** which allows an **easy maintenance** of parts directly in the field **without removing the body from the pipework**.

Set point adjustment of the regulator is operated via a spring located in the top chamber.

The modular design of the Dival 700 pressure regulators allows to install built-in slam shut valve LA.

Dival 700 competitive advantages

Operates with low differential pressure

High accuracy

Fail Open

Token IRV

Internal sensing line

Top Entry

Easy maintenance

Built-in accessories

Biomethane compatible and
20% Hydrogen blending compatible.
Higher blending available on request

Features

Features	Values
Design pressure* (PS ¹ / DP ²)	up to 2 MPa up to 20 bar
Ambient temperature* (TS ¹)**	from -20 °C to +60 °C from -4 °F to +140 °F
Inlet gas temperature*,***	from -20 °C to +60 °C from -4 °F to +140 °F
Inlet pressure (MAOP / p _{umax} ¹)	from (Pd + 0.01) MPa to 0.86 MPa from (Pd + 0.1) bar to 8.63 bar (depending on the installed seat valve)
Range of downstream pressure (Wd ¹)	from 0.5 to 145.4 kPa from 5 to 1454 mbar
Available accessories	LA slam shut, relief valve and monitor version
Minimum operating differential pressure (Δp_{min}^1)	0.01 MPa 0.1 barg
Accuracy class (AC ¹)	up to 5 up to 1% absolute (depending on working conditions)
Lock-up pressure class (SG ¹)	up to 5 (depending on version and set point)
Nominal size (DN ^{1,2})	DN 25 1"; DN 40 1" 1/2; DN 50 2";
Connections	<ul style="list-style-type: none"> Flanged class ANSI 150 RF according to ASME B16.5 and ASME B16.42 Class ANSI 125 FF according to ASME B16.1, PN 16 and 25 according to ISO 7005-1 and ISO 7005-2 Threaded Rp EN 10226-1, NPT ASME B1.20.1 (only for DN50 2")

(¹) according to EN334 standard

(²) according to ISO 23555-1 standard

(*) NOTE: Different functional features and/or extended temperature ranges may be available on request. Stated inlet gas temperature range is the maximum for which the equipment's full performance, including accuracy is guaranteed. Product may have a different pressure or temperature ranges according to the version and/or installed accessories.

(**) NOTE: Stated temperature range is the operating range for which the equipment's mechanical resistance and leakage rate are guaranteed. Some body materials, if multiple choices are available, may not be suitable for all the available versions shown.

(***) NOTE: Stated temperature range is the range for which the equipment's full performance, including accuracy and lock-up are guaranteed. Some body materials, if multiple choices are available, may not be suitable for all the available versions shown.

Construction Standards and Approvals

The **Dival 700** regulator is designed according to the European standard EN 334. The regulator reacts in opening (Fail Open) according to EN 334.

The product is certified according to European Directive 2014/68/EU (PED). Leakage class: bubble tight, better than class VIII according to ANSI/FCI 70-3.

Accessories

For the pressure regulators:

- Slam shut valve
- Relief valve

Monitor configuration

The in-line monitor is generally installed upstream of the active regulator. Although the function of the monitor regulator is different, the two regulators are virtually identical from the point of view of their mechanical components. The only difference is that monitor is set at a higher pressure than active regulator. The Cg coefficients of the worker regulator with an in-line monitor is the same, but during worker regulator sizing it shall be considered the differential pressure drop generated by the fully open in-line monitor. As a practice, to incorporate this effect a Cg reduction of 20% of the worker regulator can be applied.

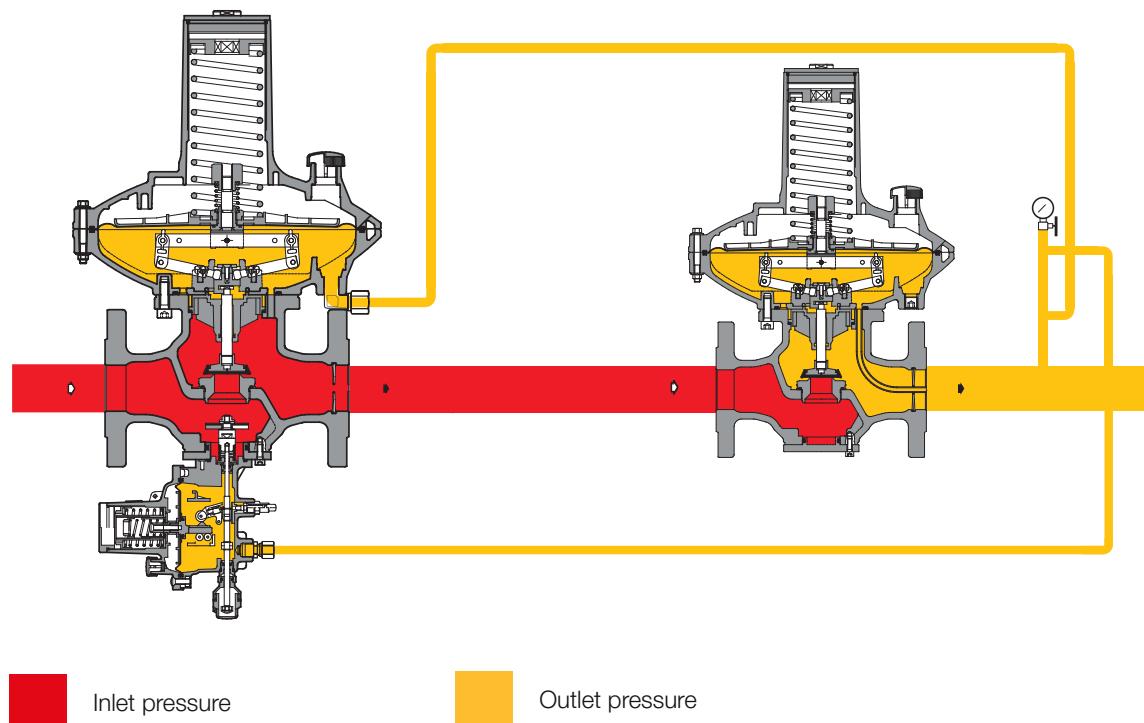

Figure 3 Dival 700 in-line monitor

Slam Shut LA

The Dival 700 pressure regulator offers the possibility of installing an **incorporated LA slam shut valve**, depending on the regulator size, and this can be done either during the manufacturing process or be retrofitted in the field.

LA is available for all sizes.

Retrofitting the LA can be done without modifying the pressure regulator assembly. With the built-in slam shut, the Cg valve coefficients is 5% lower than the corresponding version without.

The main characteristics of this device are:

- | | | | |
|-------------------------------------------------------------------------------------|-------------------------------|-------------------------------------------------------------------------------------|------------------------|
|  | Overpressure Shut-Off |  | Compact dimensions |
|  | Underpressure Shut-Off |  | Easy maintenance |
|  | Internal by-pass |  | Remote tripping option |
|  | Push button for tripping test |  | Limit switch option |

Table 7 Settings table

Relief valve

The Dival 700 series can be equipped with an incorporated internal relief valve (IRV) that discharges a limited amount of gas into the atmosphere when the regulator outlet pressure exceeds the set value. The typical triggering events are:

- Thermal expansion of the downstream gas at zero flow condition (during lock-up).
- Pressure peaks caused by sudden closing of downstream appliances or in the event of small downstream buffer volume.

When the outlet pressure returns below the set value, the relief valve closes again.

Sizing and Cg

In general, the choice of a regulator is made based on the calculation of the flow rate determined by the use of formulae using the flow rate coefficients (Cg) and the form factor (K1) as indicated by the EN 334 standard. Sizing is available through the on-line Pietro Fiorentini sizing program.

Flow rate coefficient 1" DN25

For sizing [PRESS HERE](#) or use the QR code:

Note: In case you do not have the proper credentials to access, feel free to contact your closest Pietro Fiorentini representative.

In general the on-line sizing considers multiple variables as the regulator is installed in a system, enabling a better and multiperspective approach to the sizing.

For different gases, and for natural gas with a different relative density other than 0.61 (compared to air), the correction coefficients from the following formula shall be applied.

$$F_c = \sqrt{\frac{175.8}{S \times (273.16 + T)}}$$

S = relative density (refer to Table 13)
T = gas temperature (°C)

$$F_c = \sqrt{\frac{316.44}{S \times (459.67 + T)}}$$

S = relative density (refer to Table 13)
T = gas temperature (°F)

Correction Factor Fc

Gas Type	Relative Density S	Correction Factor Fc
Air	1.00	0.78
Propane	1.53	0.63
Butane	2.00	0.55
Nitrogen	0.97	0.79
Oxygen	1.14	0.73
Carbon Dioxide	1.52	0.63

Note: the table shows the Fc correction factors valid for Gas, calculated at a temperature of 15°C and at the declared relative density.

Table 13 Correction Factor Fc

Flow rate conversion

$$\text{Stm}^3/\text{h} \times 0.94795 = \text{Nm}^3/\text{h}$$

Nm³/h reference conditions:
 T= 0 °C; P= 1 barg | T= 32 °F; P= 14.5 psig
 Stm³/h reference conditions:
 T= 15 °C; P= 1 barg | T= 59 °F; P= 14.5 psig

Table 14 Flow rate conversion

CAUTION:

In order to get optimal performance, to avoid premature wear on the regulators components, and to limit noise emissions, it is recommended to check the gas speed and its compliance with local practice and regulations. The gas speed at the outlet flange of the regulator which be calculated by the following formula:

$$V = 345.92 \times \frac{Q}{DN^2} \times \frac{1 - 0.002 \times P_d}{1 + P_d}$$

V = gas speed in m/s

Q = gas flow rate in Stm³/h

DN = nominal size of regular in mm

Pd = outlet pressure in barg

$$V = 0.0498 \times \frac{Q}{DN^2} \times \frac{14.504 - 0.002 \times P_d}{14.504 + P_d}$$

V = gas speed in ft/s

Q = gas flow rate in Scfh

DN = nominal size of regular in inches

Pd = outlet pressure in psi

Table 20 Dival 700 3/8 BP flow rate with outlet pressure from 2 kPa | 20 mbarg up to 34 kPa | 340 mbarg

Note: Recommended max flow rate are considering multiple factors such as: extend the regulator's life, mitigate the erosion/vibrations for high velocity and to minimize the noise emission.

Remark: all capacity stated are considering a stand alone regulator. In case of incorporated accessories a reduction of flow shall be considered.

Table 30 Dival 700 1 1/4 BP flow rate with outlet pressure from 5 kPa | 50 mbarg up to 34 kPa | 340 mbarg

Note: Recommended max flow rate are considering multiple factors such as: extend the regulator's life, mitigate the erosion/vibrations for high velocity and to minimize the noise emission.

Remark: all capacity stated are considering a stand alone regulator. In case of incorporated accessories a reduction of flow shall be considered.

Table 42 Dival 700 3/4 TR flow rate with outlet pressure from 30 kPa | 300 mbarg up to 130 kPa | 1300 mbarg

Note: Recommended max flow rate are considering multiple factors such as: extend the regulator's life, mitigate the erosion/vibrations for high velocity and to minimize the noise emission.

Remark: all capacity stated are considering a stand alone regulator. In case of incorporated accessories a reduction of flow shall be considered.

Dival 700 1 TR - DN 1"1/2"

From 30 kPa [300 mbarg] to 130 kPa [1300 mbarg]

Dival 700 1 TR - (accuracy 10% ; AC10 according to EN334)											
Inlet pressure		Outlet pressure									
		30 kPa / 300 mbarg		50 kPa / 500 mbarg		70 kPa / 700 mbarg		100 kPa / 1000 mbarg		130 kPa / 1300 mbarg
